

Miracle Seat®

Fresh

It's a vacuum toilet seat that COMPLETELY removes all odors BEFORE they escape from the toilet bowl.

*Foul odors & germs
are vacuumed out
before they escape
the toilet bowl -*

Clean

It vacuums microscopic airborne particles including viruses and bacteria from the toilet bowl and vents them outside of the building.

Simple

The kit includes the seat and an electric fan that is wired to the bathroom light. A standard installation takes less than 2 hours.

***Miracle Seat has been tried and proven in homes, offices, restaurants, clinics & schools.
Especially recommended for homes with children and elderly family members.***

Controls the Spread of Germs

Tests similar to commercial wind tunnel tests have shown that the Miracle Seat pulls airborne smoke from the toilet bowl through its venting system, preventing it from escaping the bowl. Microscopic water droplets carrying viruses & bacteria are also harmlessly vented out of the building.

During toilet use, germs can:

- Spread out over six feet through the air.
- Linger in the air for up to 2 hours.
- Land on tissues, towels, toothbrushes & counter tops.
- Live up to 3 days on moist surfaces, towels and crevices.

Germs found in toilet emissions include:

- Fecal coliform
- Hepatitis A
- Shigella
- Norwalk Virus
- Salmonella
- Other Viruses & Bacteria
