

# Miracle Seat Company

---

## Frequently Asked Questions:

---

- 1. Does the Miracle Seat® eliminate ALL toilet odors?**

Users in homes, offices, small businesses and restaurants claim that their Miracle Seats have completely eliminated odors created by people during the use of their toilets.
- 2. Does the Miracle Seat remove airborne germs from the toilet bowl?**

Tests similar to commercial wind tunnel tests have shown that the airflow created by the Miracle Seat does pull airborne smoke from the toilet bowl into its venting system, preventing the smoke from escaping during use. Microscopic water droplets carrying germs would also be harmlessly vented out of the building.
- 3. Does the Miracle Seat require special cleaning or maintenance?**

No. It does not require any more cleaning than a regular toilet seat and requires no maintenance. It works very much like a bathroom ceiling-fan.
- 4. Are any accessories or supplies required for the Miracle Seat?**

No. There are no batteries, filters or chemicals required for the Miracle Seat.
- 5. Where does the air from the toilet bowl go?**

The air travels through vents in the toilet seat, through pipes in the wall to an attic or a ceiling fan then through vents to the outside of the building.
- 6. Does the Miracle Seat require its own fan?**

The Miracle Seat comes with its own single-port fan, which may be installed in the bathroom ceiling or in the attic, depending upon the design of the building. Contractors may, however, use a dual-port fan to serve as both a ceiling fan and a miracle seat fan.
- 7. Can one fan support the use of two or more toilets?**

If bathrooms are located near each other on the same floor or above each other on different floors, a single fan may support two or more Miracle Seats. Each seat should be located less than 25 feet from a centrally positioned fan.
- 8. Does the Miracle Seat look like a plumbing fixture when it's installed?**

The Miracle Seat will look like any other high quality toilet seat. The flex tube that connects the seat to the exhaust pipe in the wall is only one inch wide, 15 inches long and can be installed on the side of the toilet that is away from view.
- 9. Are any special tools or skills required to install the Miracle Seat?**

No. Anyone that has installed a sprinkler system replaced a garbage disposal or upgraded faucets in a kitchen or bathroom should be able to use the same tools and experience to install a Miracle Seat.
- 10. Can the Miracle Seat be installed in an office or a retail store?**

Yes it can. Our customers include doctor's offices, beauty parlors, restaurants and executive offices, among others.
- 11. How long will a Miracle Seat last?**

The exhaust pipes and vents will last indefinitely, as long as the rest of the plumbing in the building. The fan will have a lifespan similar to that of a good quality ceiling fan and the seat will last as long as a good quality standard toilet seat. A 3-year warranty is offered for manufacturing defects in workmanship and materials.
- 12. What if I'm not happy with the Miracle Seat after I try it?**

None of our customers have complained about the Miracle Seat's effectiveness. It does exactly what we say it will do. If, however, you are not satisfied for any reason whatsoever, you may return it for a full refund within 30 days of purchase, according to our money-back guarantee.
